# GMPBasic™ Patented Livestock Management software  Visual and manual capture start-up requirements     DON'T MISS THIS  OPPORTUNITY.   OPTION 1

The most affordable way to kick-start the management of your livestock. No expensive license fees. Merely buy the tags for the amount of animals you require, access the system and reap the financial benefits. Improve your herd profitability and compliance, while you manage your livestock on a day to day basis. Enjoy the full benefits of applying technology, accuracy and reducing human error. Update your management from loose pieces of paper and outdated non-structured pocket notebooks potentially "costing" you.

1. **Identification device / ear tag:**
   Choose the best ear tag for your requirement. Do not be "caught" with tags not meeting the highest standard. GMPBasic™ use the best ear tags available in the market place. Tags with a proven track record, e.g. Allflex Tamperproof™ Tags which are designed to be tamper evident, so that once applied to an animal, the identity cannot be transferred to another animal without destroying the tag. The ALLFLEX tags are designed to be easy to apply and can be clearly seen from a distance. The male half of the tag comprises of a flexible but strong shaft which can easily rotate in the ear to reduce the risk of snagging.  The system's sequential, uniquely numbered, individual laser marked tags have the ability to outlast other tags in the harsh sun-exposed African environment.

2. **Universal Applicator**
   **These** ALLFLEX tags use the same unique Male and Female fixing system and can be applied by the Red Universal Total Tagger. This fixing system means that different  shapes and sizes of Male and Female ALLFLEX tags can be mixed to give the customer many options to suit their requirement. The same Red Universal Total Tagger can be used to apply the Allflex EID Buttons. These different tags may all be used concurrently in the GMPBasic system, linked to the UNIQUELY coded ID tags.
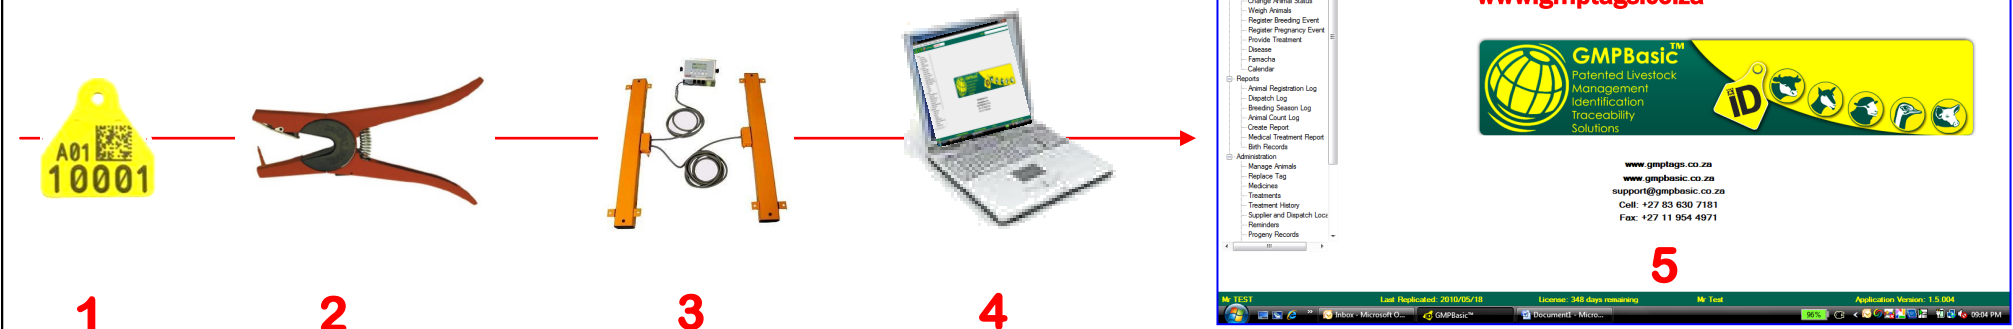

3. **Scale**
   The AE-202 Indicator is a cost-effective general purpose weighing indicator for use with strain gauge load cells. *The indicator offers:* Large clear red LED Display, highly visible in all work areas.  Simple user-friendly operations.  Full range tare.  Selectable automatic power off.  Bi-directional RS-232 Interface. Operation  from internal rechargeable battery or main power. Lockable keyboard calibration and configuration for security. Selectable digital filtering for stability. Hold function to lock the  display.  Weighing up to 1:30,000 divisions. Supports up to four 350 ohm load cells. Unit of weight can be switched between kg and lb when enabled. Counting function. High resolution setting when enabled.

4. **Computer: GMPBasic  livestock  software**

   The GMPBasic™ Patented Livestock Management software is easy to use, promoting livestock farming by collecting important data which could benefit all producers financially. The multi platform system allows for multi-species management on one program (cattle, sheep, goats, ostriches, pigs). The software allows for manual capturing of the visual animal ear tags or with machine readable 2D Barcode technology, to more advanced integrated Electronic reading EID devices. This program can function as a "stand alone" off-line, as well as electronic proof of delivery and sending of important information, such as laboratory test results, weights, proof of animals etc.

   A day to day management, recording weight (ADG), treatments and veterinary pharmaceutical products, On-line laboratory test results, recording pregnancy, progeny, flagging of withdrawal dates, erosion / controlled / notifiable diseases, recording of brand mark, Microchip, EID buttons, tattoo, stud numbers and many more. The GMPBasic state of the art system provides a livestock traceability platform across a multitude of  livestock animals and is not only restricted to cattle and sheep.
